USE ONLY FOR FILING A PROVISIONAL APPLICATION FOR PATENT

This collection of information is required by 37 CFR 1.51. The information is used by the public to file (and by the PTO to process) a provisional application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 8 hours to complete, including gathering, preparing, and submitting the complete provisional application to the PTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, Washington, D.C. 20231. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Box Provisional Application, Assistant Commissioner for Patents, Washington, D.C. 20231.

**REFLECTIVE EXTERNAL TRAVEL RESTRICTOR
AND COMPRESSIVE SNUBBER**

Brief Description of the Invention

Methodology of utilizing a secondary structural element attached to the primary body of a vibration reduction mount that serves the purpose of travel restriction and heat shielding. Utilizing a highly reflective material (aluminized steel or dichromated steel) to increase the thermal reflective properties of the part.

Advantages of the Invention

This invention provides the advantage of utilizing a secondary structural element to limit the triaxial travel of a vibration reduction mount's input interface. Lateral and axial travel are limited through the forming size of the inside opening and the interface with the mount core. Verticle tensile travel is limited by the interface with the mount core. Compressive vertical travel is limited by a tertiary elastic element attached to the secondary structure element as it interfaces with the input bracket structure. This interface provides flexibility to tune allowable travel and rate progression in all six free travel directions while functioning as a heat/physical shield to the vulnerable mount vibration reduction material.

The invention has been further developed to improve the fabrication of this part in a manner to increase the thermal reflectivity of the component while under radiant heat exposure, by using a highly reflective material such as aluminized steel, or, through the post-application of a highly reflective coating such as dichromate protectant.

Further detail and advantages of the invention can be more clearly appreciated through the accompanying drawing figures.

Brief Description of the Drawings

The numbered items in the drawings figures are described as follows:

1. Spring sub-assembly
2. Nozzle plate assembly, decoupled
3. Bellow
4. Lower housing assembly
5. Frame side bracket
6. Hex flange nut – M12 X 1.5
7. Travel restrictor
8. Bumper
9. Engine Side Bracket
10. Heat Shield
